

SQLParam

```
classDiagram
    class SQLParam {
    }
    class AccountModel {
        +Seq
        +ID
    }
    AccountModel --|> SQLParam
```

The diagram illustrates a class hierarchy. At the top is the 'SQLParam' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name 'SQLParam', while the two bottom sections are empty. Below it is the 'AccountModel' class, represented by a shaded rectangle divided into three horizontal sections. The top section contains the class name 'AccountModel'. The middle section contains two attributes: '+ Seq' and '+ ID'. The bottom section is empty. A blue arrow with a hollow triangular head points from the top of the 'AccountModel' class to the bottom of the 'SQLParam' class, indicating that 'AccountModel' inherits from 'SQLParam'.

AccountModel

+ Seq

+ ID
